

1. WAP to input any integer number and check it either it is prime or not.
2. WAP to input an integer number n and print all prime numbers from 1 upto n.
3. WAP to input an integer number n and calculate the sum of the following series
  - $1! + 2! + 3! + \dots + n!$
  - $1 + 2^2 + 3^3 + \dots + n^n$
  - $1/1! + 2/2! + 3/3! + \dots + n/n!$
4. WAP to input five integer numbers into an array and print them.
5. WAP to input 10 integer numbers into an array and the sum and average of all array elements.
6. WAP to input 10 float numbers into an array and display them in reverse order.
7. Write a program to count the number of even and odd elements in an integer array of size 10.
8. WAP to input 10 float numbers into an array calculate the sum of those numbers that are divisible by either 3 or 5.
9. WAP to input 5 numbers into an array and find the largest number.
10. WAP to input 10 numbers into an array and calculate the sum of odd numbers only.
11. WAP to input 10 integer numbers into an array and separate positive and negative numbers into two different arrays and finally print them.
12. WAP to input 10 integer numbers into an array, input another number and search whether that number is in the array or not.
