

Cloud Computing Important Questions

Long Answer Questions

1. Explain the evolution of cloud computing with reference to distributed systems, mainframe computing, cluster computing, and grid computing.
2. Discuss the different types of virtualizations used in cloud computing and their respective advantages and disadvantages.
3. Describe the various deployment models of cloud computing along with their pros and cons.
4. What is cloud migration? Explain the process of migrating to a cloud and differentiate between shallow and deep cloud migration.
5. Explain cloud computing architecture and describe the components involved in its framework.
6. Discuss the characteristic features of cloud computing with examples.
7. Compare cloud computing and grid computing in terms of architecture, scalability, and flexibility.
8. Highlight the benefits and risks associated with cloud migration.
9. Discuss the types and characteristics of cloud service models (IaaS, PaaS, SaaS) with suitable examples.
10. Explain the concept and working of distributed computing in grid and cloud environments.
11. Describe in detail the types of cloud deployment models and provide a comparison table.
12. Write a detailed note on legal issues in cloud computing.

Short Answer Questions

1. What is resource pooling in cloud computing?
2. Define and compare IaaS, PaaS, and SaaS service models.
3. Explain the working and types of server virtualization.
4. What are the benefits of using the hybrid cloud model?
5. Describe the role of a hypervisor in virtualization.
6. What are the major security challenges in cloud computing?
7. What is para-virtualization and how is it different from full virtualization?
8. Write a note on cloud computing from Google's perspective.
9. What is the purpose of a data center in cloud computing?
10. How does cloud computing ensure cost-effectiveness for organizations?
11. What is Monitoring as a Service (MaaS) and what are its advantages?
12. Explain the concept of the Jericho Cloud Cube Model.
13. Define the term "measured service" in cloud computing.
14. State two disadvantages of private cloud deployment.
15. List any three services offered by Amazon Web Services (AWS).
16. How does Azure support AI and Analytics?
17. What is the role of clients in cloud computing architecture?
18. Define automatic system in the context of cloud computing.
19. What are the major advantages of data center virtualization?
20. Describe the function of Amazon EC2 and CloudFront.
21. What are the benefits of using Azure IoT and Analytics services?
22. State the difference between insourcing and outsourcing in the Cloud Cube Model.
23. What is a control node in grid computing?
24. List any two uses of OS-level virtualization.

Very Short Answer Questions

1. What does the term “cloud” refer to?
2. Give one example of SaaS.
3. Name a benefit of virtualization.
4. What is meant by on-demand self-service?
5. Define “pay as you go” in cloud computing.
6. What is a community cloud?
7. Write one disadvantage of server virtualization.
8. Mention one use of OS-level virtualization.
9. Name a data storage service provided by AWS.
10. What is the full form of DRBD?
11. What is full virtualization?
12. Define virtualization in one line.
13. What is a public cloud?
14. Name a PaaS provider.
15. What is kernel-level virtualization?
16. Mention one use of grid computing.
17. What is an example of hypervisor type 1?
18. State one feature of Amazon S3.
19. What is a shallow cloud migration?
20. What is meant by load balancer in IaaS?
21. What is cloud computing?
22. Give one example of IaaS.
23. What is service orientation?
24. Mention one challenge in cloud security.
25. What is user mode Linux used for?
26. State a disadvantage of hybrid cloud.
27. What is utility computing?
28. What does RDS stand for in AWS?
29. What does Azure Active Directory do?
30. What is the full form of GCP?
